

Anemone hortensis

Adonis pyrenaica

Eryngium viviparum

Anacamptis coriophora

Vaccaria hispanica

Hymenophyllum tunbrigense

Aquilegia viscosa

Armeria malinvaudii

Environmental pollution.

Intensifying agricultural practices (drainage, weeding, use of pesticides...).

Ophrys aveyronensis

Astragalus alopecuroides

Overcrowding and intense trampling in tourist areas.

Destruction of natural habitats to build bridges, roads, cities...

Leucojum aestivum

LIST OF THREATS TO WILD FLORA

Lots of human activities and behaviours must take their share of responsibility for environmental degradation and ecosystem destruction. Here are just some examples of weakened or threatened wild plants.

Introduction of invasive species.

Certain leisure activities, like mountain biking, quad biking and rock-climbing, can disturb species and their habitats.

Serapias cordigera

Degradation of natural environments to build embankments, seawalls, river canals...

Rising temperatures change plants' living conditions too quickly for them to adapt.

Bellevalia romana

Ophrys aegirtica

Cypripedium calceolus

Centaurea corymbosa

Excessive sampling of rare plants.

Cistus ladanifer

Dioscorea pyrenaica

Ophrys speculum

Epipactis palustris
